

COSmanager COSbackup, COSduty, COStask and Sentinel3G

Installation and Quick Start Guide CD Version

Before Installing COSmanager

You will need

- Functional Software product distribution CD
- Licence keys
- root shell
- Approx 25Mbytes disk space

What will happen?

- cosmos user is created with UID <100
- cosmos group is created with GID <100
- Files unloaded to /usr/cosmos/COS_<version> by default
- Sets file ownership and permissions
- Create link to /bin/FSsh
- Create link to /bin/FStcl
- Create link to /bin/cos
- COSserver entry added to /etc/services
- COSserver entry added to /etc/inetd.conf or like
- inetd is restarted
- cosmos email is redirected to root
- Date format is requested

Installing COSmanager

Mount the CD

AIX mount -r -f -v cdfs <device> <mountdir>
Tru64 mount -r -t cdfs -o noversion <device> <mountdir>
HPUX mount -r -F cdfs -o cdcase <device> <mountdir>
Linux mount /mnt/cdrom
Solaris The CD will auto-mount in /cdrom

Copy the distribution

```
# cd <mountdir>/distrib/<OS>  
# cp cos<version>.cos /tmp
```

Copy the licence file

- If you received a licence file via email copy it to /tmp/.Licence

Install COSmanager

```
# cd /tmp  
# cpio -ic FSinstall < ./cos<version>.cos  
# ./FSinstall ./cos<version>.cos
```

- Read the licence agreement and enter 'y' if you accept
- If you did not receive a licence file, you will be requested to enter a licence key
- When requested, enter 'e' for European date format (dd/mm/yy), or enter 'u' for US date format (mm/dd/yy)

Running COSmanager

```
# cos -u cosmos
```
